**Warehouse/Distribution Facilities Storing High-Piled Combustible Storage**

Per the [2015 International Fire Code](https://ifc.org) (IFC), Chapter 32, high-piled combustible storage shall be in accordance with this chapter.

The site plan must reflect the following:

- **Fire Department Access Doors**: Fire Department access doors shall be shown and labeled on the site plan in accordance with Section 3206.6.1.
- **Building (Fire Lane) Access**: Fire Department access shall be provided to within 150 feet of all portions of the exterior walls of buildings used for high-piled storage.
- **Gated Entry**: Gating or barricade systems must be shown on the site plan in the manner described in the hyperlink provided.
- **Fire Hydrants**: Fire hydrants located in areas of semi-trailer movement are exposed to vehicular damage and must be suitably protected by the use of bollard protection.
- **Fire Sprinkled Structures**: Show the location of the fire department connections and fire riser room doors as described in the hyperlink provided.
