Group H, Division 5

Semiconductor fabrication facilities and comparable research and development areas in which hazardous production materials (HPM) are used, and the aggregate quantity of materials is in excess of those listed in Tables 307.1 (I) and 307.1 (2).

- See Section 202 for definition of "Story above Grade Plane" and Section 502 for definition of "Building Height."
- See Section 505 for buildings containing mezzanines.
- Area indicated is basic allowable for buildings one story in height per Table 503. See Sections 506.4 and 506.5 for allowable areas of buildings more than one story in height.
- See Section 506.2 for allowable area increases for adequate frontage.
- In fully sprinklered buildings, see Section 506.3 for area increases (not applicable for Groups H-I, H-2 and H-3).
- See Sections 506.4 and 506.5 for allowable area limitations for basements.
- For allowable area of mixed-occupancy buildings, see Sections 506.5, 508.2.3, 508.3.2 and 508.4.2.
- Fire walls are to be constructed in accordance with Section 706. See Section 706.1.1 for party walls.
- Based on Table 602, nonbearing exterior walls having a fire separation distance of at least 30 feet do not require a fire-resistance rating.
- See Section 705.5 for fire-resistance-rated construction requirements for exterior walls when considering fire separation distance.
- For protection of projections from exterior walls, see Sections 705.2 and 1406.3. For parapet requirements, see Section 705.11.
- For exterior wall requirements for buildings on the same lot, see Section 705.3.
- In Type I buildings, the fire-resistance ratings of the primary structural frame and interior bearing walls are permitted to be reduced by 1-hour when the frame/walls support a roof only (see Note a, Table 601).
- In other than Type IV construction, interior nonbearing walls and partitions require no fire-resistance rating per Table 601. For interior nonbearing partitions in Type IV construction, see Section 602.4.6.
- For use of combustible material in Type I and II construction, see Section 603.1.
- Reductions in the minimum construction types in high-rise buildings are permitted for Type IA and IB buildings (other than Groups F-1, M and S-1) as set forth in Section 403.2.1.1.
- Heavy timber shall be permitted where 1-hour or less fire-resistant construction is required (see Note c, Table 601).
- In Type I and II construction, fire-retardant-treated wood shall be permitted as part of the roof system, except in Type I buildings greater than two stories with the uppermost story less than 20 feet in height (see Section 603.1, #25.3).
- See Table 1505.1, Note c, for roof coverings of wood shakes or shingles.
- See Section 708.4 for shaft enclosure fire-resistance requirements. For exceptions to shaft enclosure provisions, see Section 708.2.
- For buildings not greater than 420 feet in height, the required rating of shaft enclosures in high-rise buildings (other than exit enclosures and elevator hoistways) may be reduced to 1-hour (see Section 403.2.1.2).
A shaft enclosure is not required in fully sprinklered buildings at openings for escalators and nonrequired stairways meeting specified conditions (see Section 708.2, Exception 2).

In other than Group I-2 and I-3 occupancies, a shaft enclosure is not required for openings that comply with the seven conditions of Exception 7 to Section 708.2.

See Table 803.9 for interior wall and ceiling finish requirements. For floor finishes, see Section 804.

In buildings fewer than three stories in height, Class B interior finishes are permitted in exit enclosures of nonsprinklered buildings and Class C for sprinklered buildings. (see Table 803.9, Note a).

See Table 508.2.5 for separation of incidental accessory occupancies.

In mixed-occupancy buildings regulated as nonseparated occupancies, the most restrictive type of construction shall apply to the entire building (see Section 508.3.1).

In a mixed-occupancy building where the provisions of Section 508.4 for separated occupancies are utilized, the occupancies shall be separated in accordance with Table 508.4.

Where a fire wall also separates occupancies that are required to be separated by a fire barrier, the most restrictive requirements of each separation shall apply (see Section 706.1).

See Table 715.4 for opening protective fire-protection ratings.

The maximum allowable area of unprotected openings in buildings (other than Group H-1, H-2 and H-3 occupancies) equipped throughout with an automatic sprinkler system ("UP, S") is equivalent to that allowed for protected openings. (see Table 705.8) 34. For the maximum area of unprotected and protect openings located in an exterior wall, use Equation 7-2 from Section 705.8.4.

See Section 705.8.1, Exception 2 for permitted unlimited unprotected openings in buildings whose exterior walls and exterior primary structural frame are not required to be fire-resistance rated.

An automatic sprinkler system shall be installed in all Group H occupancies (see Section 903.2.5.1).

See special separation requirements for areas within Group H-5 occupancies (Section 415.8.2.2).

An approved manual fire alarm system shall be provided throughout all buildings containing a Group H-5 occupancy. (see Section 415.8.8).

Areas of Group H-2, H-3, H-4 or H-5 occupancies shall be separated from any other occupancy groups in accordance with Section 508.4. (see Exception 1 in Sections 508.2.4 and 508.3.3).

A minimum interior finish classification of Class B is required for rooms and enclosed spaces in Group H occupancies where the building exceeds two stories in height.

An automatic sprinkler shall be installed throughout all buildings containing a Group H-5 occupancy (see Section 903.2.5.2).

Where the separated use provisions require a fire barrier between Group S-2 occupancies and other occupancies, the fire rating may be reduced by 1-hour but to no less than 1-hour where the Group S-2 is limited to the parking of private vehicles (see Note b, Table 508.4).

An automatic sprinkler system shall be provided for HPM exhaust ducts in accordance with Section 415.8.11. See special shaft requirements in Section 415.8.2.5.
