Based on the information presented so far, the type(s) of fire apparatus access road(s) needed for this particular site is:

- **Emergency Access Easement** - An approved means of emergency access designated and identified on the site plan, plat and civil plans that allows patrons of the self-service storage facility to unload and load their vehicles without being ticketed for parking within a dedicated fire lane easement. In place of the standard "No Parking - Fire Lane" signs an alternative sign is utilized throughout the secured area that encourages patrons to move their vehicles as far out of the drive aisle as possible while loading and unloading their vehicles.
