Public Street Systems Adjacent to Site: The site plan and civil plans must reflect the following information:

- Names and widths of all (existing or proposed) streets abutting this property.

- Indicate all existing and/or proposed traffic entry points between your site and the adjacent public street.

- Label the traffic access movements where the internal access drives connect with public streets on the site plan. Examples include full, ¾, right-in-right-out, etc.

- Show any existing or proposed medians located in the vicinity of all traffic entry points to the site.
  
  o Existing or proposed traffic medians within adjacent public streets may need to be modified to include a mountable curb to allow fire apparatus to cross over the median to gain access to the site. (See detail).

- Show the location of existing or proposed light poles and/or street signage abutting the site.
