

Contemporaneous Review of Electrical Licenses

Pursuant to Colorado Revised Statute Section 12-23-116, the City of Aurora has established procedures for conducting contemporaneous reviews of electrician licenses. These procedures apply to the inspection of all electrical work required to be performed by State Licensed Electricians. Inspections of electrical work will only be conducted when State licensed electricians or electrical contractors are listed on the permit. The City of Aurora will verify the State Electrical License by accessing the Colorado Department of Regulatory Agencies (DORA) website.

City of Aurora electrical inspectors will request, at their discretion, any or all of the following:

- Verification of electrical licenses for the electricians working on the job site for compliance with Colorado Revised Statute Section 12-23-105.
- Verification of apprentices working on the job site for compliance with Colorado Revised Statute Section 12-23-110.5.
- Verification that the electrical contractor is the same as that listed on the building permit.

If the City inspector is unable to verify the identity or verification of any of the items listed above, the inspector may fail the inspection, at their discretion, until verification can be provided.
