PACE OF PLAY

Aurora Hills, Meadow Hills and Saddle Rock now have pace of play clocks, similar to what you have seen in recent years at Murphy Creek. For those who may not be familiar with these clocks, here are a few tips. Most importantly, please don't try and change the time on the clocks to reflect the time of day. That's not their purpose. The clocks are intended to be a helpful reminder of where your group should be on the golf course. If your pace is good, when you arrive at a clock, it should reflect a time very close to your original starting time. If the clock time is well ahead of your starting time, your pace is excellent. If the clock time is beyond your start time, it's an indicator of how far behind your group is from the preferred pace. We understand your group cannot control the group ahead of you. It takes everyone on the course doing their part to create a good pace. We also realize it may be difficult at times to talk with your group members about the need to improve on your pace. Hopefully these clocks will help facilitate those conversations. We appreciate everyone's help with the challenges related to slow play.
